

# GERM SEASON MEETS ITS CHALLENGER THE GERMLESS ANTIDOTE

**A-choo!** The misery of the cold and flu season is upon us and it's no joke for families, schools and businesses.

Overcrowded doctor waiting rooms, related admittance in hospitals, and above-average work and school absenteeisms all attest to the impact of potentially serious illness and highly contagious infection that have significant physical, educational - and fiscal consequences.

**The key antidote to the spread of disease according to Saul Rosen of Germless is regular use of a new cost-effective, patented industrial-strength germ eliminating system backed by Clorox.**

## Q&A WITH SAUL ROSEN

**The primary question here for Mr. Rosen is obvious. What distinguishes this germ-fighting process from anything else out there?**

This in fact may be my favorite topic to dwell on. What makes this sterilization so revolutionary is powerful electrostatic spraying technology that outweighs any manual cleaning and traditional disinfecting routine. The scientifically-advanced process uses an air compressor with a force stronger than gravity to dispense potent germ-killing decontaminants, even extending to difficult, hard-to-penetrate areas that have otherwise always been unreachable.

**Is there an overall need for the system? I mean, how would an individual facility know if it actually has significant germ buildup?**

The process begins with a professional analysis. Using a device specifically created as a germ tester, we are able to determine the level of contamination and follow up with an individualized program of disinfection and sanitization.

**Can you give examples of the items you disinfect in the process?**

We disinfect countless items that people like you and me come in contact with every single day, such as door knobs, light switches, chairs, tables, cabinets, food areas, etc.

**How does Germless support its claim to unparalleled payoff?**

The superior tried-and-tested outcome actually helps keep your facility, employees, students, or residents healthier

while saving time and a whole lot of money. The process is safe, requires no pre-cleaning and offers more rapid protection-power by eliminating 19 organisms in 2 minutes on both hard and soft surfaces - including Cold and Flu viruses, MRSA and Norovirus, E Coli and Salmonella.

**Typically, it's only when a problem arises that people notice things. Is there any way to highlight an organization's focus on optimizing cleanliness within the facility?**

Good point you bring up! Actually, we already had this in mind when we developed our certification program. Once we complete the process, we offer official dated documentation testifying to an upgraded level of cleanliness. Intended for framed display on the wall, the certificate gives your customers peace of mind, while adding an element of excellence to your company name.

**Who can benefit from Germless's disinfecting and sanitizing solutions?**

The list is extensive: schools, offices and businesses, hospitals and resident facilities, gyms, food and hospitality establishments, and private residences all stand to gain from the ingenious innovation that successfully targets and eliminates cold and flu germs.

**In essence, you're saying Germ Season doesn't have to be so miserable?**

Absolutely. And you don't have to rely on Germless's word alone. Ask our clients. They'll tell you the truth about the antidote to the flu. After all, results don't lie.
